Weekly Coal Production

Production for Week Ended:
January 2, 1988

Summary

U.S. coal production in the week ended January 2, 1988, as estimated by the Energy Information Administration, totaled 12.8 million short tons (bituminous coal and lignite, nearly 12.8 million short tons; Pennsylvania anthracite, .03 million short tons). This was 1.8 percent lower than production in the previous week.

The preliminary estimate of 1987 production is a record 916,851 thousand short tons, surpassing the previous record 1984 production of 895,921 thousand short tons by 2.3 percent. Compared with 1986 production of 890,315 thousand short tons, the preliminary 1987 estimate represents an increase of 3.0 percent.

Detailed estimates by State will appear in the next issue of Weekly Coal Production. The 1987 production estimate includes a revision to third quarter estimates for 1987.

Beginning with this report, cumulative data in Table 1 are presented for the 52-week period ended in the current week. Data for the 52-week period ended in the corresponding week one year earlier are also included. Year-to-date comparisons of the current and prior years will be available when monthly production estimates are presented.
